- **No real traffic**

    - The tool does not capture or send anything on the internet.

    - All packets are made up for demonstration.

- **Payloads stay safe**

    - The text you type is only used inside the program and in the PCAP file you ask for.

    - Nothing else is written to disk.

- **Limited protocols**

    - Advanced mode only supports TCP and UDP.

    - If you try something else, the program stops with an error.

- **Clear defaults**

    - Basic mode uses simple, fake headers.

    - Advanced mode only runs if you add the --advanced flag.

- **Input checks**

    - The program checks that IPs, ports, and protocol choices make sense before building a packet.

    - Wrong inputs are rejected.

- **Safe to run**

    - You don't need admin or root rights.

    - It runs as a normal user process.

- No sniffing or intercepting real traffic.

- No packet injection into live networks.

- No hidden writes to disk.
